Περιγραφή:

We present an innovative project of a sustainable and healthy home, built using highly solid panel systems and very respectful of the environment, called CASA FLOW. This attractive project can be built on any plot you choose, provided it meets the necessary requirements best suited to this type of house.

One of the most important features of the FLOW model is that the house is distributed on a single floor, with a design specifically created to maximize natural light and achieve a strong connection between indoor and outdoor spaces. The house has a surface area of 120 m² and includes 3 bedrooms, 2 bathrooms, and a spacious open-plan living, dining, and kitchen area with direct access to the terrace and garden, creating a unique sense of brightness and space.

Specifically, this CASA FLOW listing is based on the construction of the house on a flat, tree-lined plot of 688 m² located in the Mas Pere urbanization in Calonge. Naturally, the same house can be built on any other plot with similar characteristics and in another location if desired.

The house is built with natural, healthy, and non-toxic materials, and features high-quality finishes such as bamboo parquet flooring, exposed wooden structure, and ecological paints. Its bioclimatic design, together with an aerothermal heating system (ducted or underfloor), provides excellent insulation, reducing energy consumption by up to 70%.

The house is delivered turnkey, with all utilities connected. The price does not include perimeter fencing,

entrance gate, swimming pool, or garden.

A modern, efficient home in perfect harmony with nature.

Additional purchase costs include VAT applied to each invoice during construction and 1.5% stamp duty (AJD) upon signing the public deed, as well as notary and land registry fees.
